YOUR DAY

Hetzner now says services blocked; Codex reviewed audiogram PR #10

Overnight mail upgraded the billing thread to a final warning. Codex left notes on the feature-flow pull request. A separate Instagram-queue PR failed its checks.

Ferdinand, Hetzner sent a new message overnight titled Final Payment Warning / Services blocked, with a PDF reminder attached. It follows the earlier payment warning that named September 23. Separately, Codex reviewed audiogram-inbox PR #10 (documenting feature flows and aligning push checks). The bot asked to keep the clip-selector smoke tests in pre-push verification and to put a new skill where Codex can find it under .agents/skills.

Another overnight notice says pull-request checks failed on the Instagram publishing queue foundation branch. Nu also mailed that tomorrow is the card payment deadline. Looking ahead, the Redpanda Streamhouse live session is still listed for Tuesday evening from the earlier invite, and Checkpoint day is on the calendar Tuesday night after Discovery.

TODAY

6:00 A.M.	News / catchup Hacker Rank, TLDR, Product Hunt	RITUAL
6:30 A.M.	Swim	
10:15 A.M.	Food	
3:00 P.M.	Food	
4:00 P.M.	Miami	BLOCK
6:30 P.M.	Discovery	BLOCK
10:00 P.M.	Journaling Reflection prompts in the event notes	

THIS WEEK

SAT-SUN — No daytime ritual blocks on calendar. Overnight sleep only in the pull for Sep 26–27.

MON-TUE PATTERN — Swim → Miami → Discovery → Journaling. Weekday skeleton returns Monday.

TUE SEP 29 — Streamhouse (Redpanda). Live session on AI agents and streaming; invite from last week.

TUE SEP 30 — Checkpoint day. On the calendar after Discovery; personal checklist only.

TONIGHT

Discovery block 6:30–10:00 p.m.; Journaling at 10:00 p.m.

DUE

Hetzner final warning / services blocked (escalation after Sep 23); Nu card payment deadline Sat Sep 26.

WEATHER

25–26° / ~14° HIGH / LOW

Light rain and a mostly cloudy sky, with a high near 25–26°C and a morning low around 14°C. Winds stay light. Sunrise 6:25 a.m., sunset 6:30 p.m.

SAT	Light rain	~25 / ~14
SUN	Partly cloudy	~27 / ~14
MON	Scattered clouds	~27 / ~13
TUE	Overcast	~26 / ~14

NEEDS A LOOK

HETZNER BILLING **ACTION**
Final warning; services marked blocked. New overnight mail with PDF reminder; follows the Sep 23 pay-by notice.

GITHUB / CODEX **ACTION**
audiogram-inbox PR #10 review notes. Keep clip-selector unit tests in pre-push; place skill under .agents/skills.

GITHUB ACTIONS **ACTION**
Instagram publishing queue PR checks failed. Feature-branch verify job failed overnight.

NU **ACTION**
Card payment deadline tomorrow. Reminder sent Thu evening; due Sat Sep 26.

GOOGLE DEVELOPER PROGRAM **FYI**
Monthly Cloud credits unlocked. Credits for prototyping in AI Studio / Cloud.

REDPANDA EVENTS **FYI**
Streamhouse live session. Still queued for Tue Sep 29.

INBOX

TLDR

Google's space datacenter, Bezos fundraising, CPU shortage

FROM TLDR

Project Suncatcher is a moonshot effort by Google to design orbital AI data centers. Its first experimental satellite will launch on October 1. Its aim will be to validate Google's vision for a constellation of AI satellites.

The satellite, about the size of a refrigerator, has four custom TPU AI accelerators and solar panels that supply about one kilowatt of power. It will serve as a test of several technologies over its few months of operation.

Waymo appears to be concentrating its efforts in just two states. 80% of its roughly 4,000 robotaxis are in California and Texas. Waymo's fleet has grown by nearly half in the past three weeks in Texas. A growing number of the vehicles are Chinese-built minivans.

EDITOR'S SUMMARY: TLDR also flags Blue Origin's first outside fundraising after years of founder capital, a new classical attack path that weakens some RSA settings in theory, and a longer piece on CPU shortages that matches today's Pragmatic Engineer Pulse. Quick links cover Oracle's data-center force-majeure notice, soft-skill demand as coding tools spread, and Meta's Tamagotchi-like Muse Charm pendant for its personal agent.

BYTEBYTEGO

The Life of Data: From Creation to Deletion

FROM BYTEBYTEGO

A web application can appear quite simple from the outside. A user submits a form, the application saves the information within the form, and a screen displays it later when the user wants to see the information. When the information is no longer needed, the information can be deleted from the system.

However, inside a growing system, the same information or data point can exist in several places. For example, a database holds the original record. A cache might store a copy of that original record for faster access. A search engine index can store some fields of that record to make search more intuitive.

An analytics pipeline might produce reports from it. Lastly, backups may preserve earlier versions of that record. Each of these copies has its own purpose, update schedule, and overall lifetime within the system.

EDITOR'S SUMMARY: The lifecycle of data shows how information can enter a system, become useful, spread to other components, become old or stale, and eventually be deleted. The emailed issue stops at the start of the Creation section. The public page is likewise truncated behind a paywall past this opener, so the rest of the lifecycle walk-through did not arrive for clipping.

Why Evals Are So Hot Right Now

BY LAURA ENTIS

What happened: Evals are having a moment. Of the 25 product management openings tech influencer Lenny Rachitsky shared last week, he says nearly half asked for experience writing evals—or tests of how well an AI system performs a task.

At app monitoring company Sentry, proposed code changes triggered roughly 1,800 eval runs in the past month, engineer Ryan Brooks reported—from near zero in May. These checks can catch problems before an update ships, such as revised instructions that cause an agent to struggle with tasks it previously handled well.

What it means: Choosing the most intelligent model used to be a reasonable default, says senior applied AI engineer Nityesh Agarwal. But frontier models have become so capable that most knowledge workers don't need their full intelligence for everyday work. Several models can already handle those tasks, making speed, price, and alignment with the user's taste more important selection criteria.

Nityesh is helping everyone at Every build personal benchmarks based on existing tasks and individual standards for good work. As model releases accelerate, these benchmarks let us quickly test how well a model handles different parts of our jobs.

EDITOR'S SUMMARY: Entis goes on to say teams need their own success definitions so model updates can be checked before customers see failures, and so cheaper models can be proven “good enough.” The same Context Window issue also covers an early read on Grok 4.7, Becky Isjwara's Hyperframes workflow, Thesis Statements, and Willie Williams's note that Slack agents may become the next company front door.

THE PRAGMATIC ENGINEER

The Pulse: a new trend of CPU shortages

FROM THE PRAGMATIC ENGINEER

I was at dinner with a bunch of CTOs and Head of Infrastructure folks recently, and from the conversation it was clear that many companies are struggling to source CPUs in the current climate, and are coming to terms with the end of juicy discounts from cloud providers for machines in the new era of surging demand fueled by AI.

The ‘memory crisis’ afflicting sectors like video gaming is well established around GPU shortages, but now it seems just as hard for businesses that need CPUs from cloud providers. Spot pricing for idle CPUs has largely vanished, and reserving specific chips can take months.

EDITOR'S SUMMARY: Gergely then quotes turbopuffer's Simon Eskildsen on labs and agents soaking up CPUs for reinforcement learning and tool-running, and notes large buyers being refused more capacity even with long leases. The piece ties the squeeze to fab and DRAM competition with GPUs and HBM, cites Claude Platform's Katelyn Lesse on multi-quarter lead times, and closes with practical advice: forecast CPU needs early, reclaim idle nodes, and lock capacity if workloads used to ride on spot.

THE TOWN

RECOMMENDED

Backrooms – HBO Max

Kane Parsons's theatrical expansion of the Kane Pixels liminal-horror shorts lands on HBO Max today. Chiwetel Ejiofor plays a furniture-store owner who finds a crack into an endless maze of ordinary rooms that stop making sense the deeper he maps them. Fluorescent offices and ugly carpet, not jump-scare carnival rides.

Hatsune Miku – EMERGE M♡DE MIKU

Dwango's BEYOND BORDERS project released a six-track collaborative EP today that pairs Hatsune Miku with producers and guests including Grimes, Odetari, MOLIY, George Clinton, and Frost Children. Tracks already in circulation include “Miku-Maxxing” and “Party Monster”; the set is on the major streaming apps.

ON THE TOWN

XI MUNIC – Ciencia y medio ambiente – tonight, CCU

Filmoteca's national science-image showcase screens a short-film block tonight at Sala Carlos Monsiváis, Centro Cultural Universitario. The slate runs about an hour and 47 minutes and includes student ecology projects, Apollo 14 training footage from Sonora, a radioastronomy short, and Canal Once's Artemis II piece. Coyoacán / CU.

Todo es uno. Excepto el 0. – Saturday, Casa del Lago

As part of the Cine y Punk / German Film Festival sidebar, Casa del Lago's Sala Lumière shows Klaus Maeck and Tanja Schwerdtorf's film on the Chaos Computer Club and founder Wau Holland Saturday afternoon. Bosque de Chapultepec; free cycle listing, limited seats.

DEAR TIMES

Do I clear Hetzner before Swim?

Dear Times, Hetzner mailed a final warning that says services are blocked and attached a PDF. Swim is still at 6:30. Discovery is on the calendar tonight as usual. Do I fix billing before I leave for the pool, or trust the servers to wait until after Journaling?

– Blocked Upstream in Mexico City

Dear Blocked Upstream, Open the PDF and clear the invoice before Swim. A services-blocked notice is the rare mail that can erase the tools you need for Miami and Discovery later. The pool will still be there after you settle the account; a locked host will not.

– The Times

JUMBLE

Unscramble each word. Circled answer boxes spell the bonus. What vanished from the cloud menu when CPUs stopped sitting idle (4 letters).

SPOTS BLOCK ORBIT AGENT · SLOTT

WANTED

Human with invoice login.

Must open a German-cloud PDF titled services blocked without waiting for Journaling. Swim goggles optional; payment confirmation mandatory.

Pre-push referee for audiogram-inbox.

Must decide whether clip-selector smoke tests stay in the hook after Codex asks. Rubber stamp optional; reading the diff mandatory.

FOR SALE

One slightly used sense of “it can wait until tonight.”

Last seen next to a Discovery block. Buyer assumes responsibility for any hosts that went dark overnight.

Spare orbital refrigerator (conceptual).

Inspired by a newsletter satellite with four TPUs and a kilowatt of solar. Does not cool leftovers. Transfers as FYI only.

NOTICES

Municipal drizzle

Light rain under a mid-20s high. Carry a shell if Miami or Discovery steps outdoors. This is weather, not a calendar event.

Department of Capacity Planning

Spot-instance bargain bins are reported empty. Citizens with agent workloads are advised to reserve CPUs before the dinner conversation gets worse.
