

The Ferdinand Times

VOL. 1 — FRIDAY, OCTOBER 2, 2026 — MEXICO CITY — AS OF 5:45 A.M.

YOUR DAY

GDG Maps + AI is tonight at 7; still missing from the calendar

Friday's Maps Platform codelab lands during Discovery. Saturday's Probabilidad session is still mail-only. A new Luma request for Grok Bot x SpaceXAI on October 9 is pending. Hetzner's final warning still has no payment-received follow-up.

Ferdinand, GDG CDMX's Maps Platform + AI codelab is tonight at 7:00 p.m. CST. The reminder has been in mail since Wednesday and still does not appear on Google Calendar. The session builds a geospatial trivia explorer in AI Studio with Maps, Gemini grounding, and a Cloud Run deploy—and it sits inside the Discovery block (6:30–10:00 p.m.).

Luma says registration for Grok Bot CDMX con SpaceXAI on Friday, October 9, 10:00 a.m.–1:00 p.m. CST is still pending host approval. That is a separate morning ask from the already-approved Reap x AIBM Agentic Buildathon the same evening. GitHub's Thursday notices—Modal OAuth added, Claude app requesting updated permissions—had no newer follow-up overnight. Audio-gram-inbox stayed quiet after Wednesday's red checks. Hetzner's Final Payment Warning from September 25 is still open. Saturday's Probabilidad at 7:00 p.m., La Casa de Satoshi on October 6, and the Buildathon on October 9 remain off the calendar.

TODAY

6:00–6:30	News / catchup	RECURRING
6:30–8:30	Swim	RECURRING
10:15 / 3:00	Food	RECURRING
4:00–6:30	Miami	RECURRING
6:30–10:00	Discovery Flex if GDG Maps + AI	RECURRING
10:00–11:00	Journaling	RECURRING

THIS WEEK

FRI OCT 2 — GDG CDMX: Maps Platform + AI, tonight 7:00 p.m. CST; AI Studio + Maps + Gemini + Cloud Run; not on calendar.
SAT OCT 3 — GDG CDMX: Probabilidad & Estadística Científica, 7:00 p.m. CST; Bayes + EDA; not on calendar.
TUE OCT 6 — ¿La IA nos matará a todos? 6–9 p.m.; La Casa de Satoshi; approved (not on calendar).
WED OCT 7 — Checkpoint day 10:00 p.m.–midnight; overlaps Journaling.
FRI OCT 9 — Grok Bot CDMX con SpaceXAI, 10:00 a.m.–1:00 p.m.; pending approval.
FRI OCT 9 — Reap x AIBM Agentic Buildathon, 5–9 p.m.; Sandbox Hub CDMX; approved.

TONIGHT

GDG Maps + AI at 7:00 p.m. if you go (mail-only); otherwise Discovery into Journaling at 10:00 p.m. High evening shower odds — Iron Maiden at GNP conflicts with a 7:00 start.

DUE

Hetzner final warning / services blocked (still open).

WEATHER

~22° / ~14° HIGH / LOW

Cool and damp at compile (~14°C, light rain shower, humid). Midday climbs toward the low 20s under cloudy skies. Shower odds rise sharply into the late afternoon and evening (~90%+ by 6:00 p.m.). Pack a layer and something waterproof if Discovery becomes Maps + AI.

SAT	Patchy rain; cooler morning	~23 / ~14
SUN	Still showery; highs in the low 20s	~23 / ~14
MON	Similar damp pattern	~23 / ~14

NEEDS A LOOK

GDG CDMX	ACTION
Maps + AI tonight 7 p.m. + Sat Probabilidad 7 p.m. — both mail-only, not on calendar.	
LUMA / SPACEXAI	ACTION
Grok Bot CDMX Oct 9 morning pending — 10:00 a.m.–1:00 p.m.; host approval not in yet.	
GITHUB	ACTION
Modal OAuth added; Claude wants more access — Thu notices, confirm if expected.	
HETZNER BILLING	ACTION
Final warning still open (Sep 25); no payment-received mail.	
LUMA / BUILDATHON	ACTION
La Casa Oct 6 approved off calendar; Buildathon Oct 9 approved; Google recovery-email alert overnight.	

INBOX

TLDR

Starlink Community, Muse economics, Pi 1.0

FROM TLDR

Starlink teases short-term community internet passes; Meta's Muse may stay ad-free inside the app; DHH's "pencils down" keynote also lands in the programming slot.

STARLINK 'COMMUNITY SITE' PROGRAM TEASES HOURLY, WEEKLY INTERNET PASSES

Starlink plans to offer hourly, daily, and weekly passes for its satellite internet service. The company is recruiting 'hosts' to sell passes to interested consumers. Pricing details have yet to be released. Starlink will take care of payments, user access, and connectivity while the hosts focus on setting up their sites and earning from connections.

WHY MUSE MAY NEVER NEED ADS

Meta is one of the very few companies that can monetize a personal agent through advertising without ever showing an ad inside the agent itself. The company can keep ads out of the Muse app and still get paid for it on Facebook and Instagram. Every Muse errand can be an incremental signal.

ROR CREATOR SPARKS NEW "DEATH OF CODING BY HAND" DEBATE

David Heinemeier Hansson, the creator of Ruby on Rails, recently announced that 37signals, a company known for its software craft, was done with writing code by hand. The maturation of AI tools has made it possible for the company to embrace a future where coding by hand is almost entirely absent.

EDITOR'S SUMMARY: TLDR's Friday flagship also covers Fervo's enhanced geothermal plant reaching commercial power, NASA green-lighting the PRIMA far-infrared probe for a 2030s launch, and Pi Durable as a framework for long-running agents. Quick links include Broadcom fundraising chatter for Anthropic chips, Aurora PostgreSQL querying Iceberg/Parquet in the lake, Cloudflare's Clef decision models, and arXiv's tighter monthly submission caps. A same-morning TLDR DevOps sibling covers S3 Vectors metadata pre-filtering—primary clip is the Starlink flagship.

BYTEBYTEGO

Why State is the Hardest Thing in Software Design

FROM BYTEBYTEGO

"Make it stateless" usually means move the hard part—keeping data correct under overlap, failure, and deploys—somewhere else, not erase it.

State is the information a system retains that affects its functionality in some way. For example, a website might keep track of users who have logged in. A document editor remembers the current text. A background worker logs which tasks it has completed and which ones are pending. A database stores the records written to it for as long as needed.

Any useful software usually needs to manage state to carry out its intended functionality. The difficulty is keeping the state correct even as requests overlap, servers are added, machines fail, and software changes are deployed.

Often, the common advice is to "make the application stateless". But this advice needs explanation. It usually means making particular application servers easy to replace while putting their important state elsewhere. It doesn't signify a complete absence of state.

EDITOR'S SUMMARY: ByteByteGo's Thursday essay reframes stateless advice as an ownership question: application servers can be disposable if login sessions, documents, job queues, and records live in systems built to keep them consistent. The paid full piece continues into strategies for managing that harder layer; the mail/web preview stops at the setup. Useful pairing with tonight's Maps + AI deploy talk—UI in AI Studio is easy; durable state is not.

EVERY

Getting Started With Open Models

BY KAI ZAU (INTRO BY KATE LEE)

A practical guide to “commodity intelligence”—when cheaper open-weight models are good enough, where to host them, and when to keep paying for frontier.

The frontier model you pay for every month can discover new antibiotics—a lot of firepower for summarizing your meeting notes. Kai Zau, a programmer who runs millions of tokens a day through open models on a Mac Studio, has spent years testing where open models are good enough to replace frontier ones.

Open models are more popular than ever. Vercel reports that 56 percent of the tokens on its AI Gateway ran through open models in August. At AT&T, they now handle 40 percent of its AI use, and the company says that share could reach 60 percent.

As an early adopter of open models, I’ve watched them grow from clunky research projects to capable workhorses. They now handle a growing share of my coding, writing, and automation work, giving me more ownership of my AI setup.

EDITOR’S SUMMARY: Zau argues most day-to-day work sits between “summarize the notes” and “discover antibiotics,” so the useful question is which model is good enough. He separates open-weight files from hosting, tools, and UI, notes many strong open models come from Chinese labs while still running on hosts you choose, and ships an audit prompt to find frontier chores worth testing on commodity models. Full hosting steps sit behind Every’s payroll.

THE PRAGMATIC ENGINEER

The Pulse: RoR creator sparks new “death of coding by hand” debate

BY GERGELY OROSZ

DHH says 37signals has gone pencils-down on hand-written code as the default; Orosz traces the messy industry transition, quality slips, and why engineering work may still grow.

The creator of Ruby on Rails, David Heinemeier Hansson, caused quite a stir last week with comments in his Rails World keynote, when he revealed that coding by hand is dead at his company, 37signals.

“At 37signals, a couple of weeks ago, we made the decision that it clearly means we’re done writing code by hand. Writing code by hand at 37signals is now an exceptional state.”

EDITOR’S SUMMARY: Orosz notes 37signals is leaning into native mobile and even Rust back-ends because agents write “good enough” Rust. He revisits January predictions (sloppier code, juniors pressed to level up) and points to real quality slips. Counter-intuitively, he argues engineering demand may rise: validating agent factories and building AI-native products. Bonus free Pulse excerpt.

THE TOWN

RECOMMENDED

East of Eden – Netflix, streaming now

Zoe Kazan’s seven-episode take on Steinbeck dropped yesterday with all episodes at once. Florence Pugh plays Cathy Ames; Christopher Abbott and Mike Faist are the Trask brothers. Useful Friday Discovery block if Maps + AI does not win the evening.

Animals – Netflix, Oct 9

Ben Affleck’s Netflix thriller still lands next Friday, with Kerry Washington, Gillian Anderson, and Steven Yeun. Affleck told Bloomberg Screentime he used AI on the shoot “for lots of things.” One week out after tonight’s Maps codelab energy.

ON THE TOWN

Iron Maiden – Fri Oct 2, 9:00 p.m., Estadio GNP Seguros

The Run For Your Lives 50th-anniversary tour hits CDMX with a set tilted toward early albums—*Number of the Beast*, *Powerslave*, *Seventh Son*—and Anthrax opening. Start is 9:00 p.m., so it conflicts with a 7:00 p.m. GDG if you try both.

Interstellar Sinfónico – Sat Oct 3, 5:00–8:00 p.m., El Cantoral

Hans Zimmer’s *Interstellar* score played live by a 50-plus orchestra while the film runs in 4K. Starts two hours before Saturday’s 7:00 p.m. GDG Probabilidad—either/or unless you skip one. Amadeus Live remains at Auditorio Nacional the same night at 7:30 p.m.

PUZZLES

Discovery, on schedule.

Mail: Maps + AI at 7.

Umbrella up. Speakers still on.

DEAR TIMES

Discovery owns 6:30–10, GDG wants 7:00—do I move the block or skip the codelab?

Dear

Times, Tonight Discovery runs 6:30–10:00 p.m. GDG Maps + AI is at 7:00 p.m. and still only lives in mail. Saturday is another 7:00 p.m. GDG. Rain is likely. Do I shorten Discovery, skip Maps, or put both GDG nights on the calendar and decide later?

– Split evening in Mexico City

Dear Split evening, Put both GDG nights on the calendar this morning so they stop existing only as reminders. For tonight, pick one: leave for Maps around 7:00, or keep Discovery and treat Maps as optional. Do not try Iron Maiden at 9:00 on top of a 7:00 codelab. Saturday is the same shape—calendar first, choose later. Hetzner and GitHub permission notices need a short daytime look, not another evening block.

– The Times

JUMBLE

Unscramble each word. Circled answer boxes spell the bonus. What GDG Maps + AI and Saturday Probabilidad still need on Google Calendar (4 letters).

NIRA

SPAM

TENEV

CKPA

RAIN MAPS EVENT PACK · RSVP

WANTED

One honest 7:00 p.m. Friday decision.

Applicants must choose Maps + AI or Discovery before rain peaks. Dual RSVPs that assume teleporation will be returned to sender.

Calendar entries for events that already have tickets.

La Casa (Oct 6) and the Agentic Buildathon (Oct 9) remain Luma-approved and Google-absent. Friday and Saturday GDG blocks also accepted.

FOR SALE

Slightly damp umbrella, pre-opened.

Conditioned by a ~90% evening shower forecast and a laptop that needs to stay dry between Miami and a possible codelab. Buyer supplies own Cloud Run deploy.

Spare “pencils down” anxiety (conceptual).

Inspired by DHH’s Rails World remarks and a Pulse issue about agents writing the default path. Does not clear a Hetzner warning. Transfers as Inbox reading only.

NOTICES

Department of Pending Approvals

Grok Bot CDMX con SpaceXAI (Oct 9, 10:00 a.m.–1:00 p.m.) awaits host OK. Citizens already holding Buildathon tickets for that evening should not confuse morning pending with evening approved.

Municipal weather desk

Cool start ~14°C; high near 22°C; shower odds climb hard after mid-afternoon. Iron Maiden at GNP is outdoor-adjacent energy; Interstellar Sinfónico at El Cantoral is indoor. This is weather, not a seat assignment.
